#### **Open Systems Announces Release of TRAVERSE Version 11**

November 11, 2009 - Minneapolis, MN - Open Systems, Inc., a leading provider of business management and accounting software, today announced the release of TRAVERSE Version 11.

Using powerful Microsoft technologies like .NET and SQL Server, TRAVERSE Version 11 represents a new approach to business software. It is built on a framework designed to simplify the extension of its functionality, allowing users to personalize, design, integrate and customize the software.

"We couldn't be more excited to unveil this new version of TRAVERSE," said Open Systems VP of Sales Paul Lundquist. "This solution gives our customers unprecedented adaptability, and all the tools they will need to mold the software to their unique business needs come standard with the product."

TRAVERSE Version 11 allows individual users to adjust menu terms and organization, and create and save individualized views of data for inquiry and reporting. The TRAVERSE Design Studio, new with this version, lets users add custom fields, change the layout of the user interface, create custom forms such as purchase orders and invoices, and build import and export definitions to provide integration to other business software or automation equipment. Any changes made to the software using the design tools are preserved when service packs and other updates are applied to the software.

The new version of TRAVERSE is certified to run on Microsoft Windows 7/Microsoft Windows Server 2008 R2. Because of this compatibility, TRAVERSE Version 11 offers customers innovative user interface features as well as enhanced security and reliability improvements, tools to keep them connected to data stored on the Internet, advanced graphic hardware acceleration, full support for multi-core processing, sophisticated management features, and flexible access to improve mobile computing.
